Profile

I am a front-end developer who has worked for FinTechs and startups, developing web apps using **React**, **Typescript**, **Redux**, **CSS**, and **CSS-in-JS** technologies.

I have worked alongside **Designers** and **Product Managers**, mainly using **Agile** processes like **Planning**, **Retros**, and **Refinement** meetings. I have also worked closely with Product teams, using **Analytics** tools to build engagement dashboards and conversion reports so the leadership could make product-related decisions.

Skills

⊙ **Team Player**
   Pro-active, helpful and available for helping teammates to solve complex problems.

⊙ **Technical Rigor**
   I accept new challenging designs prototypes and deliver them with accurate UIs, considering only the most necessary scope removals to achieve those results.

Experiences

Origin Financial
Dec, 2019 – Fev, 2024
Front End Engineer

Stack

Javascript (ES6+), Typescript, Styled Components, Webpack, React, Redux, React Query, Heap Analytics, LaunchDarkly

⊙ Product development from the ground up
⊙ UI and UX with React and Typescriipt
⊙ Configuration of Front End builds tools.
